## Pathfinder Office

---

The Trimble® GPS Pathfinder® Office software package of GNSS postprocessing tools incorporating Trimble® DeltaPhase™ differential correction technology, designed to develop GIS information from data collected in the field.

Postprocessing with the GPS Pathfinder Office significantly improves the autonomous accuracy of data collected in the field all the way down to decimeter (10 cm / 4 inch) level, depending on the environment and the receiver. Data can be imported to the GPS Pathfinder Office software from a number of GIS and database formats. Also previously collected GIS data to be taken back to the field for verification and update. Features collected can be compared against other datasets such as vector GIS, aerial photography, and satellite imagery.
