University of Arkansas, Fayetteville Heating and Chilling Plant – Heating Interior

Merged scans of the Facilities Management Heating and Chilling Plant buildings were collected with the [Leica C10 laser scanner](#). The scans include multiple floors within the building interiors as well as the building exteriors. Interior scans were collected with a point spacing of approximately 2 cm at the most dense (at a range of < 2 meters) to approximately 120 cm at the least dense (at a range of 35 meters). Exterior scans were collected with a point spacing of approximately 30 cm. The data sets have been separated due to file size and data density.
